

TEMPORARY CROWN INSTRUCTIONS

1. Temporary crowns are meant to last 2-3 weeks while your permanent crown is being made. They are not as strong as a permanent crown. Please avoid hard, sticky, or chewy foods like candy and chewing gum while wearing the temporary crown.
2. Brush your teeth as you normally would, but do not floss the temporary crown. If you need to floss, pull the floss through gently to avoid dislodging it.
3. The temporary crown holds the space for the permanent crown. If it comes off, you may put it back on with Vaseline until you are able to return to the office.

Please call our office at (931)363-6300 if you have any questions or concerns
